Pages : 3 (including Cover)

Dear Mr. Kelly,

You probably recall I phoned you about a change of address on this application. You also mentioned that it would be advisable to send any prior art immediately as the application should be viewed soon. In that case I am faxing to you a letter I received from a company regarding my application, though this is mainly concerned with a future divisional application I intend to file.

Perhaps since you had located the file, sending this to you would ensure it is included.

Kind regards,
Greg Orme.

Dear Greg Orme,

thank you for your e-mail dated April 8, 2002.

We have thoroughly studied your PCT-applications WO 99/10766, WO 00/25429 and WO 01/31384, of which the first one and the last one pertain to three-dimensional representation.

Our conclusions are as follows:

1. WO 99/10766

We are of the opinion, that current 4D-Vision 3D-displays base on a different technical approach, which is not disclosed neither by your patent description nor the drawings. Our products are thus not included in the claims.

We think that our own patent cases may coexist to your one. It might be expected that a further national examination will cite the document US 6,219,184 as a particularly relevant one.

2. WO 01/31384

We are of the opinion, that current 4D-Vision 3D-displays base on a different technical approach, which is not disclosed neither by your patent description nor the drawings. Our products are thus not included in the claims.

Moreover, we think that our own patent cases may coexist to your one.

It might be expected that a further national examination will cite the following particularly relevant documents:

JP 10-333090

JP 10-186272

JP 08-194190

JP 09-275579

US 5,825,337

GmbH**4D-Vision®****RECEIVED**

DEC 03 2003

Technology Center 2600

WO 01/18589 (not published prior to your publication, but partly earlier priority)
GB 2252175

BTW, taking into consideration that the international search report cites 13-X further documents, we are convinced that the national/regional phases of the '384 patent will result in a declined scope of claims.

We would like to talk about another approach how we might come together:

Since you are an expert in the field of 3D-visualization and since you obviously have a computer hardware company, how about joining forces: Are you interested in becoming an authorized 4D-Vision reseller in Australia ?

4D-Vision has ready-for-use and certified autostereoscopic 3D-displays (15"/50") including driver software. More information can be obtained from www.4d-vision.de (also available in English).

Please let us know what do you think about being a 4D-Vision reseller.

**Kind regards,
Dipl.-Phys. Markus Klippstein
